

Frank Buckland 1826-1880 Pioneer of Public Communication on Fisheries & Aquaculture

The Buckland Foundation

“Securing the Supply of Food From Marine Fisheries”

The Second Buckland Fisheries Colloquium

A free one-day event

on Tuesday 2nd June 2015 from 0930 -1600

at Fishmongers' Hall, London Bridge, London EC4R 9EL

- Sponsored by the Fishmongers' Company, and facilitated by the Centre for Environment, Fisheries and Aquaculture Science, Lowestoft Laboratory

- Featuring Lectures by the joint Buckland Professors for 2015; supporting talks; a BUFFET LUNCH; and facilitated discussions.

BUCKLAND LECTURE (45min) Dr Colin Bannister, Emeritus Fellow & former senior fisheries science advisor at Cefas Lowestoft.

“Has EU fisheries management achieved the recovery of depleted stocks?”

TALK (20min) “The role of climate change” Dr J Pinnegar, Cefas Lowestoft

BUCKLAND LECTURE (45min) Dr Carl O'Brien, Cefas Fellow, & Chief Fisheries Science Advisor to Defra.

“Future Fisheries Management & Governance in the EU”

TALK (20min) “The Catchers' Perspective” (Barrie Deas, CEO of NFFO)

TALK (20min) “A Vision for Fisheries 2050” (Dr Stephen Simpson, University of Exeter)

Q & A sessions will follow each Lecture and Talk, and Afternoon discussions will be facilitated by senior scientists from Cefas Lowestoft.

There is a maximum of 80 places. To attend, please register your name, email address and phone number by 27 May 2015 at Eventbrite using:-

Send cancellations or queries to Colin Bannister at rcolinabannister@gmail.com

The Lectures and Talks

The topic 'Securing the Supply of Food from Marine Fisheries' will be discussed using recent marine fish stock assessment data to explore how depleted EU stocks have reacted to stock recovery programmes, whilst also subject to climate change. The Colloquium also examines planned changes in EU fisheries management and regional fisheries governance; the views of the catcher industry; and a longer look into the future of fisheries by 2050.

Speakers

Professor Colin Bannister, BSc, PhD, Emeritus Cefas Fellow, a former senior fisheries science advisor at Lowestoft, and FSBI Le Cren Medallist (2014).

Professor Carl O'Brien, BSc, MSc, PhD, CStat, CSci, FLS, Cefas Fellow, and Chief Fisheries Science Advisor to Defra.

Dr John Pinnegar, BSc, PhD, FSBI Medallist (2009), Specialist on ecosystem studies and on the impacts of climate change.

Mr Barrie Deas, Chief Executive of the National Federation of Fishermen's Organisations, and a former Buckland Professor (2006)

Dr Stephen Simpson, Senior Lecturer in Marine Biology & Global Change, University of Exeter

Moderator and Facilitators from Cefas.

Dr David Righton, fish behaviour specialist and currently science leader for fisheries at Lowestoft.

Dr Simon Jennings, expert in marine life histories and community ecology, and advisor to national and international bodies on biodiversity, fisheries, and environmental management.

Dr Stephen Mackinson, expert in marine ecosystems modelling and fisheries stakeholder engagement.

Dr Georg Engelhard, expert in the history of fisheries, fish biology and changes in fish distribution.

The Buckland Foundation Lectures and Colloquia.

This event follows the successful first Colloquium held at the same venue in March 2013, which featured Professor Sidney Holt and Professor Ian Boyd (Defra Chief Scientist) on the subject of Maximum Sustainable Yield. Buckland Lectures and Colloquia are part of the ongoing activities of the Buckland Foundation, which organises open lectures on contemporary topics in fisheries or marine science in honour of the memory of Frank Buckland, a 19th century Army surgeon, amateur naturalist, and Inspector of Salmon Fisheries from 1867-1880. Buckland pioneered public communication on rational fishing and on aquaculture, and the Foundation was established in 1920 in order to continue that tradition.

The Cefas Laboratory, Lowestoft, UK.

The Lowestoft Laboratory is a principal site of the Centre for Environment, Fisheries and Aquaculture Science, a Defra agency and a recognised leader in marine and aquatic science. Throughout a long and distinguished history Lowestoft scientists pioneered fisheries and oceanographic investigations in the seas around Britain, and led the development of the quantitative fisheries science and advice that has supported international fisheries management. Cefas scientists and advisors are still widely acclaimed worldwide for research and science-based advice that shapes and implements policy. Key work streams include sustainable management of fisheries and shellfisheries; marine biodiversity and habitats; climate change impacts; marine planning; environmental licensing; fish & shellfish health.

Timetable

0900 – 0930	Assembly and Refreshments
0930 - 0940	Welcome: Dr David Righton, Moderator, Cefas Lowestoft
0940 - 1025	BUCKLAND LECTURE Professor Colin Bannister, Cefas (Emeritus) “Has EU fisheries management achieved stock recovery?”
1025 - 1035	Comments & Questions
1035 - 1100	TALK Dr John Pinnegar, Cefas Lowestoft “The role of climate change”
1100 - 1110	Comments & Questions
1110 - 1130	Refreshments
1130 - 1215	BUCKLAND LECTURE Professor Carl O’Brien, Cefas Lowestoft “Future Fisheries Management & Governance in the EU”
1215 - 1225	Comments & Questions
1225 – 1330	Buffet lunch
1330 - 1350	TALK Barrie Deas, Chief Executive of NFFO “The Catchers’ Perspective”
1350 - 1400	Questions/Comments
1400 - 1420	TALK Dr Stephen Simpson, University of Exeter “A Vision for Fisheries 2050”
1420 - 1430	Questions/Comments
1430 - 1530	FACILITATED DISCUSSIONS
1530 - 1600	Plenary feedback, and disperse

There is a maximum of 80 places. To attend, please register your name, email address and phone number by 27 May 2015 at Eventbrite using:-
